Introduction

Purchase

Congratulations on the purchase of a ScanStation C10 instrument.

This manual contains important safety directions as well as instructions for setting up the product and operating it. Refer to "6 Safety Directions" for further information.

Read carefully through the User Manual before you switch on the product.

Product identification

The type and the serial number of your product are indicated on the type plate. Enter the model and serial number in your manual and always refer to this information when you need to contact your agency or Leica Geosystems authorised service workshop.

Type: _______________

Serial No.: _______________
Symbols

The symbols used in this manual have the following meanings:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🔄 Danger</td>
<td>Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>
<td>🔄 Warning</td>
<td>Indicates a potentially hazardous situation or an unintended use which, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td>🔄 Caution</td>
<td>Indicates a potentially hazardous situation or an unintended use which, if not avoided, may result in minor or moderate injury and/or appreciable material, financial and environmental damage.</td>
</tr>
<tr>
<td>🖇️</td>
<td>Important paragraphs which must be adhered to in practice as they enable the product to be used in a technically correct and efficient manner.</td>
</tr>
</tbody>
</table>

1 Description of the System

1.1 Packing / Unpacking

Unpacking

When in its transport container, the ScanStation C10 can sit in either a face-up or face-down position.

To take the instrument out of its container, grasp the handle and the base of the instrument, and lift. Use caution due to the weight of the instrument (13 kg).

Pack the instrument the same way it is delivered.
1.2 Container Contents

Transport container for ScanStation C10

a) ScanStation C10 User Manual
b) Ethernet cable
c) Allen keys
d) Protection cover
e) GHT196 distance holder for height meter
f) GEB241 internal batteries
g) Glass cleaning kit
h) GHM008 height meter
i) GEV230 AC power supply (not supplied with system)
j) Power cable, country specific
k) Cyclone DVD and C10 System CD-ROM
l) USB memory stick, not supplied with system
m) ScanStation C10
Transport container for ScanStation C10 accessories

- a) GEB271 external battery pack
- b) GKL271 charging station
- c) GEV225 AC power supply for GKL271 charging station
- d) GKL212 basic charger including car adapter cable
- e) GEB241 internal batteries
- f) AC/DC adapter for basic charger with daisy chain cable
1.3 Instrument Components

Overall system

- a) ScanStation C10
- b) Laptop, not supplied with system
- c) GEV228 ethernet cable
- d) GEB241 internal batteries
- e) GEV230 AC power adapter
- f) GEV97 power cable
- g) GEV225 AC power supply for GKL271
- h) GKL271 charging station and GEB271 battery pack
- i) Tribrach
- j) Tripod
- k) Transport container for ScanStation C10
- l) Transport container for ScanStation C10 accessories
ScanStation C10, Description of the System

ScanStation C10

- Removable handle
- Rotating mirror (laser and camera aperture)
- Battery compartment B
- Circular level
- Socket for power supply, 5 pin female
- Antenna
- ON/OFF button
- USB socket
- Stylus
- Touchscreen user interface
- Battery compartment A
- Ethernet socket, 8 pin female
1.4 Power Supply

GEB241 Li-Ion internal battery

GKL212 basic charger

For more details refer to the GKL212 User Manual.
GKL221 professional charger

a) Mains cable, country specific
b) Mains cable socket on the charger
c) Adapter bays I and II for the GDI221 battery adapter
d) Vehicle adapter GDC221 - optional
e) Vehicle cable socket on the charger
f) Function indicator
g) Capacity and error indicators
h) Selection button
i) Status indicator for external battery connection
j) GDI 221 battery adapter
k) Battery status indicators

For more details refer to the GKL221 User Manual.
The GEB271 battery pack can only be used together with the GKL271 charging station.

- a) Battery pack
- b) Battery connector interface, female
- c) Guide rail for fitting with charging station
GKL271 charging station for the GEB271 battery pack.

- Charging station  
- Battery connector interface, male  
- Guide rail for fitting with battery pack  
- Select button  
- Power and error indicators  
- Lock/unlock button  
- Clip for tripod mount  
- Port P2 for power output  
- Port P1 for power output  
- Port P3 for power input
**GEV225 AC power supply**

GEV225 AC power supply for the GKL271 charging station.

- **A**) AC power supply cable
- **B**) Connector 3 pin, male
- **C**) Control LED; lights when the AC power supply is connected to a power plug.
- **D**) AC power supply
- **E**) Mains power cable, country specific

---

**GEV97 ScanStation C10 power cable**

Connects ScanStation C10 scanner to GKL271 charging station.

- **A**) Cable
- **B**) Connector 5 pin, male
GEV230 AC power supply

AC power supply for the ScanStation C10 scanner.

- a) GEV97 ScanStation C10 power cable
- b) Cable and connector, 5 pin female
- c) Control LED; lights when the AC power supply unit is connected to an AC power supply.
- d) GEV230 AC power supply unit
- e) Mains power cable, country specific

1.5 Other Components

GEV228 ethernet cable

- a) Cable
- b) Connector, 8 pin male
- c) Ethernet connector
1.6 Cabling

Cabling for ScanStation C10 with GEB271 battery pack

a) ScanStation C10
b) GEV97 power cable
c) GEB271 battery pack
d) GKL271 charging station
The GEV225 AC power supply cannot be used as an AC power supply for the scanner. It is designed exclusively for powering the charging station and must not be connected to the instrument.

The GEB271 battery pack can only be used together with the GKL271 charging station.
**Danger**

For GEV225 AC power supply:
The product is not designed for use under wet and severe conditions. If unit becomes wet it may cause you to receive an electric shock.

**Precautions:**
Use the product only in dry environments, for example in buildings or vehicles. Protect the product against humidity. If the product becomes humid, it must not be used!

---

**Danger**

Death or serious injury can occur if unit is not connected to ground.

**Precautions:**
To avoid electric shock power cable and power outlet must be grounded.

---

**Warning**

Batteries not recommended by Leica Geosystems may be damaged if charged or discharged. They may burn and explode.

**Precautions:**
Only charge and discharge batteries recommended by Leica Geosystems.
The GEV230 AC power supply cannot be used as an AC power supply for the battery charging station. It is designed exclusively for powering the scanner and must not be connected to any other device.
For GEV230 AC power supply:
The product is not designed for use under wet and severe conditions. If unit becomes wet it may cause you to receive an electric shock.

Precautions:
Use the product only in dry environments, for example in buildings or vehicles. Protect the product against humidity. If the product becomes humid, it must not be used!

Danger

Death or serious injury can occur if unit is not connected to ground.

Precautions:
To avoid electric shock power cable and power outlet must be grounded.
A dedicated laptop computer is an option with your ScanStation C10 system. This computer must be loaded with proprietary software from Leica Geosystems, and configured to operate with your instrument.

It is recommended that you do not use your dedicated laptop computer for any purpose other than scanning with your instrument or other Leica HDS software applications.

Using software, ethernet cards or modems that are not specifically designed to work with your dedicated laptop computer can corrupt the settings in your computer, and can adversely affect system performance.
1.7 Field of View (FoV)

Field of view

The instrument has a rotating scanhead and a rotating mirror that covers a 360° x 270° field of view (FoV).

![Field of View Diagram](image-url)
1.8 Description of the User Interface

Overview of face plate

Overview status bar icons

The icons in the status bar display the current status information of the instrument. Clicking a status icon gives direct access to a detailed status description.

- Internal battery A indicates the status of the battery in compartment A which is located at the same side cover as the touchscreen.
- Internal battery B indicates the status of the battery in compartment B at the opposite side cover without a screen.

Overview user input

The system offers two different virtual keyboards for user input:

1. **User input for alphanumeric input fields:**
   When an alphanumeric input field is selected with the stylus, an alphanumeric keypad opens offering letters, numbers and special characters.

![Diagram of alphanumeric input field and keypad](image)

- **a)** Alphanumeric input field
- **b)** Alphanumeric keypad
2. **User input for numeric input fields:**

When a numeric input field is selected with the stylus, a numeric keypad opens offering numbers and some special characters.

![Image of numeric input fields and keypad]

- **a)** Numeric input field
- **b)** Numeric keypad
1.9 HDS *Cyclone* Software Suite

General

Leica Geosystems HDS *Cyclone* software modules provide point cloud users with the widest set of work process options for 3D laser scanning projects in engineering, surveying, construction and related applications. The software consist of five packages:

- *Cyclone* SCAN:
  allows the user to control the Scanner.

- *Cyclone* REGISTER:
  allows the user to register multiple Scans together or to Geo-reference point clouds.

- *Cyclone* SURVEY:
  gives the user basic functionality to extract and measure information from point clouds.

- *Cyclone* MODEL:
  gives the user the full functionality of *Cyclone*. The user is able to extract and measure features and to create a 3D Model from point clouds.

- *Cyclone* PUBLISHER:
  allows the user to publish point cloud data to a panoramic viewing format which can be posted to the web. The user can then view this data using the Internet Explorer plug-in Leica TruView.
• For more information on *Cyclone* Software Suite, please visit: http://www.leica-geosystems.com/hds

• *Cyclone* Software has also online help available which can be accessed by pressing the F1 key on your keyboard.

---

**General operating principles**

• **Download:**
  *Cyclone* software, as well as important support documentation, can be downloaded from the Leica Geosystems HDS Website (http://www.leica-geosystems.com/hds/en/27054.htm). The user must create an account before the download section is accessible.

• **Installation:**
  You must use a Windows account with administrator privileges to install or upgrade *Cyclone*, CloudWorx for AutoCAD, CloudWorx for MicroStation, CloudWorx for PDMS or CloudWorx for Intergraph SmartPlant® Review.

  1. Download the *Cyclone* Installshield from the website shown above.
  2. Run the Installation file.
  3. Follow the onscreen instructions and select the software you wish to install.
  4. Go to the License Request Page.

• **Language:**
  *Cyclone’s* operating language is English.
2 Setting Up the Instrument

2.1 General Information

Use the tripod

The instrument should always be set up on its tripod. Using the tripod specified for the scanning system guarantees maximum stability during scanning operations.

Always set up the instrument on its tripod. Do not set up the instrument directly on the ground for scanning operations.

It is always recommended to shield the instrument from direct sunlight and avoid uneven temperatures around the instrument.
2.2 Scanner Setup on Tripod

Setup step-by-step

Shield the instrument from direct sunlight and avoid uneven temperatures around the instrument.
1. Extend the tripod legs to allow for a comfortable working posture. Tighten the screws at the bottom of the legs.
2. Place the tribrach on the tripod and secure it with the central fixing screw.
3. Set up the tripod so that the tripod plate is as horizontal as possible.
4. Push the tripod legs firmly into the ground.
5. Place the instrument on the tribrach and secure it with the tribrach's locking knob.
6. Level up the instrument using the instrument's circular level. Turn two of the foot screws together in opposite directions. The index finger of your right hand indicates the direction in which the bubble should move. Now use the third foot screw to centre the bubble.

⚠️ The instrument must be levelled before it is switched ON. If not levelled using the tribrach’s or the instrument’s circular level, it may not power up properly or scanning accuracy may not be achieved.
2.3 Setup Over a Benchmark with the Internal Laser Plummet

**Description**

This topic describes an instrument setup over a marked ground point using the laser plummet. Geo-referencing of the ScanStation C10 is established by setting up over a known or assumed control point, with optional reference target measurement to set the azimuth direction, and establishing a local or global coordinate system. The ScanStation C10 allows you to traverse, resect or free-station. Known azimuth or known backsight measurements can be observed.

- It is always possible to set up the instrument without the need for a marked ground point.
- The data scanned with ScanStation C10 is corrected by an internal dual-axis compensator, when the dual-axis compensator is enabled (via onboard control or *Cyclone*).
- The laser plummet described in this topic is built into the vertical axis of the instrument. It projects a red spot onto the ground, making it much easier to centre the instrument.
- The laser plummet cannot be used in conjunction with a trivich equipped with an optical plummet.
Setup step-by-step

1. Extend the tripod legs to allow for a comfortable working posture (a). Position the tripod approximately over the marked ground point, centring it as well as possible (b).

2. Place the tribrach on the tripod (c) and secure it with the central fixing screw (d).

Shield the instrument from direct sunlight and avoid uneven temperatures around the instrument.
3. Place the instrument on the tribrach (e) and secure it with the tribrach’s locking knob.
4. Turn on the instrument by pressing the ON/OFF button (f). Go to **Status, Level and Laser Plummet, Plummet** and activate the laser plummet (g).
5. Move the tripod legs (a) and use the tribrach footscrews (h) to centre the plummet (i) over the ground point.
6. Adjust the tripod legs (j) to level the circular level (k).
7. By using the electronic level (**Status, Level and Laser plummet, Level**) turn the tribrach footscrews (h) to precisely level the instrument.
8. Centre the instrument precisely over the ground point (i) by shifting the tribrach on the tripod plate.
9. Repeat steps 7. and 8. until the required accuracy is achieved.

Please see also section “Scanning with ScanStation C10” in the **Cyclone** documentation for more information.
2.4 Instrument Height

To get an accurate height measurement use the GHM008 instrument height meter in conjunction with the GHT196 distance holder which are both included with the scanner.

1. Place tripod centrally over the ground point, level instrument.
2. Click GHT196 distance holder to tribrach. It must "snap" onto the cover over an adjusting screw.
3. Unfold measuring tongue, pull out tape measure a little.
4. Insert GHM008 instrument height meter in the distance holder and attach.
5. Swivel measure in the direction of the ground point, pull out until the tip of the measuring tongue touches the point on the ground, keep under tension and do not allow to sag, clamp if necessary.
6. Read height of the instrument (ground - tilt axis) in the reading window at the red marking (in the example 1.627 m).
• For detailed information about the GHM008 instrument height meter and GHT196 distance holder refer to the GHM008/GHT196 user manual which is delivered with these items.

• The tilt axis height of the ScanStation C10 is 250 mm. Take care to use the GHM008 which has a special scale to measure the height of instruments with a tilt axis height of 250 mm. Do not use a tape with any other scale.

• Alternatively the instrument height can be measured with a common, 1:1 scaled measuring tape from the point on the ground to the little notch under the red Leica logo at both side covers of the scanner. This distance will then be from the ground point to the tilt axis.
2.5 Power Supply and Charging

Primary use/charging

- The battery must be charged prior to using for the first time because it is delivered with an energy content as low as possible.
- The permissible temperature range for charging is between 0°C to +45°C / +32°F to +113°F. For optimal charging we recommend charging the battery at a low ambient temperature of +10°C to +20°C / +50°F to +68°F if possible.
- It is normal for the battery to become warm during charging. Using the chargers recommended by Leica Geosystems, it is not possible to charge the battery if the temperature is too high or too low.
- For new batteries or batteries that have been stored for a long time (> three months), it is effectual to make only one charge/discharge cycle.
- For Li-Ion batteries, a single discharging and charging cycle is sufficient. We recommend carrying out the process when the battery capacity indicated on the charger or on a Leica Geosystems product deviates significantly from the actual battery capacity available.

Operation/Discharging

- The battery can be operated from -20°C to +55°C / -4°F to +131°F.
- Low operating temperatures reduce the capacity that can be drawn; very high operating temperatures reduce the service life of the battery.
As the battery pack contains rechargeable cells it is always recommended to handle the battery and charging station with care. Observe the LEDs on the charging station before and after the charging process, as well as during operation. For details please refer to section "Indicator panel" on page 50.

- When port P3 is connected for charging, both ports P1 and P2 cannot be used for operation: no simultaneous charging and discharging.
- When port P1 is connected for operation, port P2 cannot be used for operation and vice versa: no simultaneous operation of two ports.
Indicator panel

On the charging station’s front side are the Select button and three LEDs for capacity and error indication.

a) Safety directions to read this manual  c) Select button
b) Capacity indication            d) Error indication

The LEDs show the actual charge/discharge status or indicate an error status. During charging, the LEDs always show the current status. While discharging or in standby, the status will only be shown for about 10 seconds after pressing the select button.

</tbody>
</table>
Additional status indicators

- When the GEB271 battery pack is inserted into the GKL271 charging station, the three LEDs light green for one second.
- When the GEV225 AC adapter is connected to the GKL271 charging station for charging, the three LEDs light green for one second and then show the actual battery level.

If the charger indicates an error when the battery is connected, try connecting a different battery to find out whether the fault lies with the battery or with the charging station.
If the problem persists, contact Leica Geosystems or your local agency.
Charging the battery

1. Slide the battery pack into the charging station. When connected, the three LEDs light up for 1 sec.
2. Plug the AC power supply cable of the AC power supply into port P3 of the charging station.
3. Plug the power cable into the AC port of the AC power supply.
4. Plug the power cable into a socket outlet. The charging process starts automatically when all parts are plugged in. The battery is fully charged when all three LEDs are flashing green.
5. After charging is completed, remove the power cable from the socket outlet.
6. Remove the battery pack from the charging station by moving the lock/unlock button.
**Danger**

For AC power supply:
The product is not designed for use under wet and severe conditions. If unit becomes wet it may cause you to receive an electric shock.

**Precautions:**
Use the product only in dry environments, for example in buildings or vehicles. Protect the product against humidity. If the product becomes humid, it must not be used!

---

**Period of use, life span of the power supply**

Operation time for a fully charged external power supply is approximately six hours at room temperature.

Before storing the power supply for a long period of time, recharge it to avoid shortening the life span.
Before storage, remove the battery from the charging station.
Handling advice

- After a maximum of six hours the charging process is terminated.
- Properly remove the wall plug first, before removing the Lemo connector.
- Do not tamper with the power supply or charger during charging or usage.
- Do not put flammable objects near the power supply during charging or usage.

Charging the GEB241 internal battery

Using the GKL221 professional charger:

**Inserting:**
1. Insert the battery flush to the front edge of the GDI221 battery bay.
2. Push the battery to the back with only slight pressure to the stop position.

**Removing:**
- Pull the battery to the front stop and then remove it.

For more details refer to the GKL221 User Manual.
Using the GKL212 basic charger:

**Inserting:**
1. Insert the battery flush to the front edge of the battery bay.
2. Push the battery to the back with only slight pressure to the stop position.

**Removing:**
- Pull the battery to the front stop and then remove it.

For more details refer to the GKL212 User Manual.
1. Open the battery compartment.
2. Remove the battery holder.
3. Remove the battery from the battery holder. Insert the new battery into the battery holder, ensuring that the contacts are facing outward and that the tip on the holder fits into the slot of the battery. The battery should click into position.
4. Insert the battery holder back into the battery compartment.
5. Turn the knob to lock the battery holder in place.
6. Switch on the instrument to start the boot process.
Check the battery capacity indicator LEDs to ensure that remaining power is enough to operate the instrument and finish the scheduled scan process.
3 Scanning

3.1 Switching the System On/Off

Switch on procedure

1. Set up the instrument as desired. Refer to chapter "2 Setting Up the Instrument" for more information.
2. Press and hold the ON/OFF button until a beep is audible.
3. The instrument's fan starts.
4. The Leica Geosystems welcome screen starts.
5. Wait until the Main Menu appears on the display and the Idle State message is shown in the message bar.
6. Once in Idle State the scanner is ready for operation.

Switch off procedure

1. From the current menu return to the Main Menu.
2. In the Main Menu press the button.
3. In the popup window confirm the question Do you really want to power down the scanner? with Yes.
4. Wait for the scanner to shut down.
In the event of a system crash follow the alternative switch off procedure:

1. Press and hold the ON/OFF button for a minimum of 6 seconds.
2. After 3 seconds a single beep and after 6 seconds a double beep is audible.
3. After the double beep release the ON/OFF button.
4. Wait for the scanner to shut down.

### 3.2 Ambient Conditions

#### Unfavourable surfaces for scanning

- Highly reflective (polished metal, gloss paint)
- Highly absorbent (black)
- Translucent (clear glass)

*Color or powder these surfaces before scanning if necessary.*

#### Unfavourable weather conditions

- Rain, snow or fog cause poor measurements, so it is not possible to survey during these conditions!
- Surfaces that are directly illuminated by the sun cause an increased range noise and therefore a larger measurement uncertainty.
- If some objects are scanned against the sunlight or a bright spotlight, the optical receiver of the instrument can be dazzled so heavily that in this area no measured data is recorded. A "black hole" appears in the reflectance image.
<table>
<thead>
<tr>
<th>Temperature changes</th>
<th>If the instrument is brought from a cold environment, for example from storage, into a warm and humid environment, the glass window at the mirror or in extreme cases even the interior optics can condensate. This may cause measurement errors. Precaution: Avoid rapid temperature changes and give the instrument time to acclimatise.</th>

Config | Offers access to all commands for the configuration of the system.
Tools | Offers access to all commands for disk formatting, data transfer, license management and display calibration.
### 3.3.1 Scan

**Description**

In the Scan menu, all commands for the scanner operation control are available.
Field of View

In the **Fld of View** tab, the horizontal (left/right) and vertical (bottom/top) limits of the field of view (FoV) can be selected. In the **Presets** field the following different predefined settings for the FoV are listed:

<table>
<thead>
<tr>
<th>Preset</th>
<th>Horizontal FoV [°]</th>
<th>Vertical FoV [°]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom View</td>
<td>User defined</td>
<td>User defined</td>
</tr>
<tr>
<td>Quick Scan</td>
<td>Defined by Quick Scan aiming</td>
<td>User defined (default: -45 to +90)</td>
</tr>
<tr>
<td>Rectangle 60x60</td>
<td>60</td>
<td>60</td>
</tr>
<tr>
<td>Rectangle 90x90</td>
<td>90</td>
<td>90</td>
</tr>
<tr>
<td>Rectangle 360x60</td>
<td>360</td>
<td>60</td>
</tr>
<tr>
<td>Rectangle 360x90</td>
<td>360</td>
<td>90</td>
</tr>
<tr>
<td>Target All</td>
<td>360</td>
<td>270</td>
</tr>
</tbody>
</table>

**Available commands:**

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sc + Img</td>
<td>Start scan and image acquisition with selected FoV and resolution.</td>
</tr>
<tr>
<td>Scan</td>
<td>Start scan only with selected FoV and resolution, no images.</td>
</tr>
<tr>
<td>Command</td>
<td>Function</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ScWin</td>
<td>Open scan window for scan area selection from video stream image.</td>
</tr>
<tr>
<td>VwSc</td>
<td>View point cloud of last scan with zoom, pan and show next/previous functionality.</td>
</tr>
<tr>
<td>VwImg</td>
<td>View last image and show next/previous functionality.</td>
</tr>
<tr>
<td>Shift -&gt; Target</td>
<td>Open the <strong>Target Definition</strong> screen to select target ID, target height and target type.</td>
</tr>
<tr>
<td>Shift -&gt; Image</td>
<td>Start image acquisition with selected FoV, exposure time and image resolution.</td>
</tr>
<tr>
<td>Shift -&gt; ChkBS</td>
<td>Open <strong>Check Backsight</strong> menu to define a known backsight target for current setup control.</td>
</tr>
</tbody>
</table>
In the Resolution tab, the horizontal and vertical point spacing for a specific range can be set. In the Resolution field different predefined settings for the point resolution are listed:

<table>
<thead>
<tr>
<th>Preset</th>
<th>Horizontal spacing</th>
<th>Vertical spacing</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom Res</td>
<td>User defined (0.5 m default)</td>
<td>User defined (0.5 m default)</td>
<td>User defined (100 m default)</td>
</tr>
<tr>
<td>Low Res</td>
<td>0.2 m</td>
<td>0.2 m</td>
<td>100 m</td>
</tr>
<tr>
<td>Medium Res</td>
<td>0.1 m</td>
<td>0.1 m</td>
<td>100 m</td>
</tr>
<tr>
<td>High Res</td>
<td>0.05 m</td>
<td>0.05 m</td>
<td>100 m</td>
</tr>
<tr>
<td>Highest Res</td>
<td>0.02 m</td>
<td>0.02 m</td>
<td>100 m</td>
</tr>
</tbody>
</table>

The resulting number of points is calculated based on the settings in the Fld of View tab and the Resolution tab.

Available commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sc + Img</td>
<td>Start scan and image acquisition with selected FoV and resolution.</td>
</tr>
<tr>
<td>Command</td>

<tr>
<td><strong>Scan</strong></td>
<td>Start scan only with selected FoV and resolution, no images.</td>
</tr>
<tr>
<td><strong>ScWin</strong></td>
<td>Open scan window for scan area selection from video stream image.</td>
</tr>
<tr>
<td><strong>Dist</strong></td>
<td>Open video camera window to measure the distance to the object to be scanned.</td>
</tr>
<tr>
<td><strong>Shift -&gt; Target</strong></td>
<td>Open the <strong>Target Definition</strong> screen to select target ID, target height and target type.</td>
</tr>
<tr>
<td><strong>Shift -&gt; Image</strong></td>
<td>Start image acquisition with selected FoV, exposure time and image resolution.</td>
</tr>
<tr>
<td><strong>Shift -&gt; ChkB</strong></td>
<td>Open <strong>Check Backsight</strong> menu to define a known backsight target for current setup control.</td>
</tr>
</tbody>
</table>
3.3.2 Manage

Description
In the Manage menu all commands for project management on the scanner are available.

Available commands:

<table>
<thead>
<tr>
<th>Command</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cont</td>
<td>Confirm selection and return to previous screen.</td>
</tr>
<tr>
<td>Command</td>
<td>Function</td>
</tr>
<tr>
<td>-----------</td>
<td>--------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>New</strong></td>
<td>Create new scan project with project name, description and name of creator.</td>
</tr>
<tr>
<td><strong>Edit</strong></td>
<td>Edit description and creator of existing scan project. Also show name, date and size of existing project.</td>
</tr>
<tr>
<td><strong>Del</strong></td>
<td>Selected project will be deleted after confirmation.</td>
</tr>
<tr>
<td><strong>Data</strong></td>
<td>Show list of ScanWorlds and Stations of selected project. In the list select a station to get access to station information and to view scans, targets and images.</td>
</tr>
<tr>
<td><strong>Shift -&gt; Trans</strong></td>
<td>Transfer selected project or all projects to USB memory storage.</td>
</tr>
</tbody>
</table>
3.3.3 Status

Description
In the Status menu all commands for the scanner’s status information are available.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery &amp; Memory</td>
<td>Battery</td>
<td>Status information about internal battery, external battery and AC power supply.</td>
</tr>
<tr>
<td>Icon</td>
<td>Command</td>
<td>Description</td>

<td>Local Date</td>
<td>Set local date.</td>
</tr>
<tr>
<td>Language</td>
<td>Language</td>
<td>Select language for the user interface or delete a language from the list.</td>
</tr>
</tbody>
</table>
3.3.5 Tools

Description
In the **Tools** menu all commands for disk formatting, data transfer, license management and display calibration are available.
### Format

- **Command**: Format the complete data partition of the internal hard disk.
- **Description**: All project data will be erased.

### Transfer

- **Projects**: Transfer selected project or all projects to USB memory storage device.
- **System Files**: Upload new firmware to the instrument.

### License

- **Manual**: Enter license key manually.
- **Upload**: Upload license key file from USB memory storage device.

### Display Calibration

- **Command**: Recalibrate the touch screen by clicking three points on the display.
3.4 Cyclone SCAN

Scanning with Cyclone SCAN

In addition to the onboard control the ScanStation C10 can be controlled via the Cyclone SCAN interface.

1. Connect one end of the ethernet cable to the ScanStation C10 ethernet connector and the other end to a computer which has Cyclone SCAN installed.
2. Start Cyclone SCAN.
3. In the Cyclone Navigator select Configure, Scanners.
4. In the Configure Scanners window press the Add button.
5. In the Add Scanner window select ScanStation C10 for the scanner model and add a descriptive scanner name (for example “ScanStation C10 (xxxx)” with xxxx being the scanner’s serial number). No IP address is needed for the ScanStation C10.
   Close the Add Scanner window to return to the Cyclone Navigator.
6. In the Cyclone Navigator expand the Scanners folder and double click the new scanner name to open the Scan Control window.
7. The initial Scan Control window prompts to select a project folder in the Select Project window.
8. In the Select Project window select an existing project folder or create a new one. Close this window by confirming with the OK button.
9. In the Scan Control window select Scanner, Connect to connect your computer to the scanner. After connection has been established the Scan Control window
ScanStation C10, Scanning

will show the status **Connected and ready** at the bottom of the window. ScanStation C10 and *Cyclone* are now ready to start a scan.

- Retain enough free disk space on the computer: depending on your project, up to 50% of your hard disk.
- Do not additionally overload the computer with additional tasks and applications while scanning.
- It is not recommended to perform other *Cyclone* tasks while scanning.
- For details about the ScanStation C10 scan operation with *Cyclone* SCAN refer to the *Cyclone* help system or your local support team.
## Troubleshooting

### ScanStation C10

<table>
<thead>
<tr>

</tr>
<tr>
<td>External battery no longer charging.</td>
<td>At the end of its life time the external battery has lost most of its capacity. The battery needs to be replaced.</td>
<td></td>
</tr>
</tbody>
</table>
The diagnostic procedure explains how to create log files with the user interface of your ScanStation C10 instrument in case of problems with the scanner. To create log files, follow the steps described below:

1. From the **Main Menu** go to **Tools, Transfer, Transfer Project**.
2. Connect an external USB memory device to the scanner’s USB connector.
3. Press the **Logs** button.
4. In the USB memory device's main directory a folder named **Logs** will be created containing log files:
   - **C10_1234.log**: log file of current scan day with 1234 being the last four digits of the scanner serial number,
   - **C10_1234.20100829.log**: older log file with scanner serial number and scan date embedded in the file name (year, month, day),
   - **UpgraderLog.txt**,
   - **svclog.txt**,
   - **XenaService.log**.
5. Send the content of the **Logs** folder together with details about scanner type, scanner serial number and a short description of the problem to your local support team.
Summary

If you experience problems with your instrument:

• Email the scanner’s log files to your local support:
  • For Americas support: us-support@hds.leica-geosystems.com
  • For Europe, Middle East and Africa support: euro-support@hds.leica-geosystems.com
  • For Asia support: asia-support@hds.leica-geosystems.com

• Log files are stored on the USB memory stick in the folder **Logs**.
5 Care and Transport

5.1 Check & Adjust

⚠️ Caution

Units that are exposed to high mechanical forces, e.g. through frequent transport or rough handling, it is recommended to carry out a check and adjust once a year by the manufacturer respectively just after such a high stress exposure.
## 5.2 Transport

### Transport in the field
When transporting the equipment in the field, always make sure that you
- either carry the product in its original transport container,
- or carry the tripod with its legs splayed across your shoulder, keeping the
  attached product upright,
- or remove product from tripod and carry it by its handle.

### Transport in a road vehicle
Never carry the product loose in a road vehicle, as it can be affected by shock and vibration. Always carry the product in its transport container and secure it.

### Shipping
When transporting the product by rail, air or sea, always use the complete original Leica Geosystems packaging, transport container and cardboard box, or its equivalent, to protect against shock and vibration.

### Shipping, transport of batteries
When transporting or shipping batteries, the person in charge of the product must ensure that the applicable national and international rules and regulations are observed. Before transportation or shipping, contact your local passenger or freight transport company.
5.3 Storage

Product

Respect the temperature limits when storing the equipment, particularly in summer if the equipment is inside a vehicle. Refer to "7 Technical Data" for information about temperature limits.

Field adjustment

After long periods of storage, inspect the field adjustment parameters given in this user manual before using the product.

Batteries

- Refer to "7.5 Environmental" for information about storage temperature range.
- A storage temperature range of +5°C to +35°C / +41°F to +95°F in a dry environment is recommended to minimize self-discharging of the battery.
- At the recommended storage temperature range, batteries containing a 10% to 50% charge can be stored for up to one year. After this storage period the batteries must be recharged.
- Remove batteries from the product and the charger before storing.
- After storage, recharge batteries before using.
- Protect batteries from damp and wetness. Wet or damp batteries must be dried before storing or use.
5.4 Cleaning and Drying

Windows and targets

- Blow dust off scanner windows.
- Never touch the glass with your fingers.
- Use only a clean, soft, lint-free cloth for cleaning. If necessary, moisten the cloth with water or pure alcohol.
- Do not use other liquids; these may attack the polymer components.
- Charger:
  Use only a clean, soft, lint-free cloth for cleaning.

Damp products

Dry the product, the transport container, the foam inserts and the accessories at a temperature not greater than 40°C / 104°F and clean them. Do not repack until everything is completely dry.

Cables and plugs

Keep plugs clean and dry. Blow away any dirt lodged in the plugs of the connecting cables.
# 5.5 Glass Cleaning Procedure

## General
The ScanStation C10 scanning mirror must be kept clean. The instructions must be followed as described in this chapter to clean the scanner mirror.

*Warning*
Direct intrabeam viewing is always hazardous.

**Precautions:**
Before cleaning glass, ensure the instrument is switched off.

*Tip*
A glass cleaning kit can be ordered through your local Leica Geosystems dealer.

### Dust and debris removal
Using a compressed gas duster (e.g., UltraJet® 2000 Gas Duster or UltraJet® Compressed CO2 Duster), remove dust and debris from surface of scanner glass.

*Tip*
Never rub off dust or debris as this will scratch the glass and so possibly cause permanent damage to the special optical coatings.
Cleaning of the optics

Soiling of the glass pane can cause extreme measurement errors and therefore useless data!

**Precautions:**
All soiling that is visible on the glass pane has to be removed, except for single small dust particles that adhere inevitably.

![Caution]

Clean the glass pane regularly with the provided glass cleaning kit:

- Switch off instrument.
- Washing hands is necessary in order to avoid grease on the cleaning tissue.
- Better, use gloves to avoid finger oil on the glass.
- Then use the lens tissue for wiping circularly from the center to the edge until there is only a thin film of detergent visible.
- Use a new lens tissue for drying the pane, wipe in circles.
- If any smears from cleaning are visible against back light, repeat the procedure.
- Do not touch the side of the paper that is used for cleaning with your fingers.
- Do not reuse tissues that have been used before.
- Only use non-fuzzy lens tissues.
- Do not use air from the pneumatic power system as this is always slightly oily!
5.6 Adjustment of the Circular Level

On the instrument step-by-step

1. Level up the instrument in advance with the electronic level, assuming that the instrument is correctly adjusted. In the **Main Menu** go to **Status, Level and Laser plummet, Level** to access the electronic bubble.

2. The bubble must be centered. If it extends beyond the circle, use an allen key to center it with the adjustment screws. Turn the instrument slowly 200 gon (180°). Repeat the adjustment procedure if the bubble does not stay centered.

---

After the adjustment, no screw shall be loose.
On the tribrach step-by-step

1. Level up the instrument with the electronic level, assuming that the instrument is correctly adjusted. Remove the instrument from the tribrach. In the Main Menu go to Status, Level and Laser plummet, Level to access the electronic bubble.

2. The bubble of the tribrach must be centered. If it extends beyond the circle, use the adjusting pin in conjunction with the two cross-headed adjustment screws to centre it.

After the adjustment, no screw shall be loose.
5.7  Service of the Tripod

Service tripod step-by-step

1. Moderately tighten the allen screws with the allen key supplied with the tripod.
2. Tighten articulated joints just enough to keep the tripod legs open when lifting the tripod off the ground.
3. Tighten the allen screws of the tripod legs.

⚠️ The connections between timber and metal must be firm and tight.
5.8 Adjustment of the Laser Plummet

Inspecting the laser plummet step-by-step

1. Place and secure the instrument into the tribrach and onto a tripod.
2. Using the tribrach footscrews, level the instrument with the electronic level. In the Main Menu go to Status, Level and Laser plummet, Level.

The laser plummet is located in the vertical axis of the instrument. Under normal conditions of use, the laser plummet does not need adjusting. If an adjustment is necessary due to external influences, the instrument has to be returned to any Leica Geosystems authorised service workshop.
3. Press **Page** to access the **Laser Plummet** page. Switch on the laser plummet. Inspection of the laser plummet should be carried out on a bright, smooth and horizontal surface, like a sheet of paper.

4. Mark the centre of the red dot on the ground.

5. Turn the instrument through 360° slowly, carefully observing the movement of the red laser dot.

The maximum diameter of the circular movement described by the centre of the laser point should not exceed 3 mm at a distance of 1.5 m.

6. If the centre of the laser dot describes a perceptible circular movement or moves more than 3 mm away from the point which was first marked, an adjustment may be required. Inform your nearest Leica Geosystems authorised service workshop. Depending on brightness and surface, the diameter of the laser dot can vary. At 1.5 m it is about 2.5 mm.
6 Safety Directions

6.1 General

Description
The following directions should enable the person responsible for the product, and the person who actually uses the equipment, to anticipate and avoid operational hazards.

The person responsible for the product must ensure that all users understand these directions and adhere to them.
6.2 Intended Use

Permitted use

• Measuring horizontal and vertical angles.
• Measuring distances.
• Scanning objects.
• Capturing and recording images.
• Recording measurements.
• Computing by means of software.
• Remote control of product.
• Data communication with external appliances.
• Visualising the aiming direction and vertical axis.

Adverse use

• Use of the product without instruction.
• Use outside of the intended limits.
• Disabling safety systems.
• Removal of hazard notices.
• Opening the product using tools, for example screwdriver, unless this is specifically permitted for certain functions.
• Modification or conversion of the product.
• Use after misappropriation.
• Use of products with obviously recognisable damages or defects.
• Use with accessories from other manufacturers without the prior explicit approval of Leica Geosystems.
• Inadequate safeguards at the surveying site, for example when measuring on roads.
• Deliberate dazzling of third parties.
• Controlling of machines, moving objects or similar monitoring application without additional control- and safety installations.

⚠️ Warning

Adverse use can lead to injury, malfunction and damage.
It is the task of the person responsible for the equipment to inform the user about hazards and how to counteract them. The product is not to be operated until the user has been instructed on how to work with it.
### 6.3 Limits of Use

6.4 Responsibilities

Manufacturer of the product

Leica Geosystems AG, CH-9435 Heerbrugg, Switzerland, hereinafter referred to as Leica Geosystems, is responsible for supplying the product, including the user manual and original accessories, in a completely safe condition.

Manufacturers of non Leica Geosystems accessories

The manufacturers of non Leica Geosystems accessories for the product are responsible for developing, implementing and communicating safety concepts for their products, and are also responsible for the effectiveness of those safety concepts in combination with the Leica Geosystems product.

Person in charge of the product

The person in charge of the product has the following duties:

- To understand the safety instructions on the product and the instructions in the user manual.
- To be familiar with local regulations relating to safety and accident prevention.
- To inform Leica Geosystems immediately if the product and the application becomes unsafe.
- To ensure that the national laws, regulations and conditions for the operation of radio transmitters are respected.

Warning

The person responsible for the product must ensure that it is used in accordance with the instructions. This person is also accountable for the training and the deployment of personnel who use the product and for the safety of the equipment in use.
6.5 Hazards of Use

⚠️ Warning
The absence of instruction, or the inadequate imparting of instruction, can lead to incorrect or adverse use, and can give rise to accidents with far-reaching human, material, financial and environmental consequences.

**Precautions:**
All users must follow the safety directions given by the manufacturer and the directions of the person responsible for the product.

⚠️ Caution
Watch out for erroneous measurement results if the product has been dropped or has been misused, modified, stored for long periods or transported.

**Precautions:**
Periodically carry out test measurements and perform the field adjustments indicated in the user manual, particularly after the product has been subjected to abnormal use and before and after important measurements.

⚠️ Caution
During the operation of the product there is a hazard of squeezing extremities or entanglement of hairs and/or clothes by rotating parts.

**Precautions:**
Keep a safe distance of the rotating parts.
**Danger**

Because of the risk of electrocution, it is very dangerous to use poles and extensions in the vicinity of electrical installations such as power cables or electrical railways.

**Precautions:**
Keep at a safe distance from electrical installations. If it is essential to work in this environment, first contact the safety authorities responsible for the electrical installations and follow their instructions.

---

**Warning**

If the product is used with accessories, for example masts, staffs, poles, you may increase the risk of being struck by lightning.

**Precautions:**
Do not use the product in a thunderstorm.

---

**Warning**

During dynamic applications, for example stakeout procedures, there is a danger of accidents occurring if the user does not pay attention to the environmental conditions around, for example obstacles, excavations or traffic.

**Precautions:**
The person responsible for the product must make all users fully aware of the existing dangers.
**Warning**

Inadequate securing of the surveying site can lead to dangerous situations, for example in traffic, on building sites, and at industrial installations.

**Precautions:**
Always ensure that the survey site is adequately secured. Adhere to the regulations governing safety and accident prevention and road traffic.

---

**Warning**

If computers intended for use indoors are used in the field there is a danger of electric shock.

**Precautions:**
Adhere to the instructions given by the computer manufacturer with regard to field use in conjunction with Leica Geosystems products.

---

**Caution**

If the accessories used with the product are not properly secured and the product is subjected to mechanical shock, for example blows or falling, the product may be damaged or people may sustain injury.

**Precautions:**
When setting-up the product, make sure that the accessories, for example tripod, tribrach, connecting cables, are correctly adapted, fitted, secured, and locked in position.
Avoid subjecting the product to mechanical stress.
**Warning**
Only Leica Geosystems authorised service workshops are entitled to repair these products.

**Caution**
With the remote control of products, it is possible that extraneous targets will be picked out and measured.

*Precautions:*
When measuring in remote control mode, always check your results for plausibility.

**Warning**
Using a battery charger not recommended by Leica Geosystems can destroy the batteries. This can cause fire or explosions.

*Precautions:*
Only use chargers recommended by Leica Geosystems to charge the batteries.

**Warning**
High mechanical stress, high ambient temperatures or immersion into fluids can cause leakage, fire or explosions of the batteries.

*Precautions:*
Protect the batteries from mechanical influences and high ambient temperatures. Do not drop or immerse batteries into fluids.
**Warning**

Short circuited battery terminals can overheat and cause injury or fire, for example by storing or transporting in pockets if battery terminals come in contact with jewellery, keys, metallised paper or other metals.

**Precautions:**
Make sure that the battery terminals do not come into contact with metallic objects.

**Caution**

During the transport, shipping or disposal of batteries, it is possible for inappropriate mechanical influences to constitute a fire hazard.

**Precautions:**
When transporting shipping, or disposing batteries, the person in charge of the product must ensure that the applicable national and international rules and regulations are observed. Before transportation or shipping contact your local passenger or freight transport company.

**For Power Supply:**

**Danger**

Death or serious injury can occur if unit is not connected to ground. To avoid electric shock power cable and outlet must be grounded.
**Danger**
The product is not designed for use under wet and severe conditions. If unit becomes wet it may cause you to receive an electric shock.

**Precautions:**
Use the product only in dry environments, for example in buildings or vehicles. Protect the product against humidity. If the product becomes humid, it must not be used!

**Warning**
If you open the product, either of the following actions may cause you to receive an electric shock:
- Touching live components.
- Using the product after incorrect attempts were made to carry out repairs.

**Precautions:**
Do not open the product. Only Leica Geosystems authorised service workshops are entitled to repair these products.

**Warning**
Batteries not recommended by Leica Geosystems may be damaged if charged or discharged. They may burn and explode.

**Precautions:**
Only charge and discharge batteries recommended by Leica Geosystems.
**Warning**

If the product is improperly disposed of, the following can happen:
- If polymer parts are burnt, poisonous gases are produced which may impair health.
- If batteries are damaged or are heated strongly, they can explode and cause poisoning, burning, corrosion or environmental contamination.
- By disposing of the product irresponsibly you may enable unauthorised persons to use it in contravention of the regulations, exposing themselves and third parties to the risk of severe injury and rendering the environment liable to contamination.
- Improper disposal of silicone oil may cause environmental contamination.

**Precautions:**

The product must not be disposed of with household waste. Dispose of the product appropriately in accordance with the national regulations in force in your country. Always prevent access to the product by unauthorised personnel.

Product specific treatment and waste management information can be downloaded from the Leica Geosystems home page at http://www.leica-geosystems.com/treatment or received from your Leica Geosystems dealer.
6.6 Laser Classification, Visible Laser

6.6.1 General

General

The following directions (in accordance with the state of the art - international standard IEC 60825-1 (2007-03) and IEC TR 60825-14 (2004-02)) provide instruction and training information to the person responsible for the product and the person who actually uses the equipment, to anticipate and avoid operational hazards.

The person responsible for the product must ensure that all users understand these directions and adhere to them.

Products classified as laser class 1, class 2 and class 3R do not require:
- laser safety officer involvement,
- protective clothes and eyewear,
- special warning signs in the laser working area
if used and operated as defined in this user manual due to the low eye hazard level.

Products classified as laser class 2 or class 3R may cause dazzle, flash-blindness and after-images, particularly under low ambient light conditions.
6.6.2 Distance Laser

General

The laser incorporated into the product produces a visible green laser beam which emerges from the rotating mirror.

The laser product described in this section, is classified as laser class 3R in accordance with:

Class 3R laser products:
Direct intrabeam viewing may be hazardous (low-level eye hazard), in particular for deliberate ocular exposure. The risk of injury for laser class 3R products is limited because of:

a) unintentional exposure would rarely reflect worst case conditions of (e.g.) beam alignment with the pupil, worst case accommodation,
b) inherent safety margin in the maximum permissible exposure to laser radiation (MPE),
c) natural aversion behaviour for exposure to bright light for the case of visible radiation.
Warning

From a safety perspective class 3R laser products should be treated as potentially hazardous.

**Precautions:**
Prevent direct eye exposure to the beam. Do not direct the beam at other people.

<td>2.5 mm</td>
</tr>
<tr>
<td>NOHD (Nominal Ocular Hazard Distance) @ 0.25s</td>
<td>6 m / 19.7 ft.</td>
</tr>
</tbody>
</table>
Warning

Potential hazards are not only related to direct beams but also to reflected beams aimed at reflecting surfaces such as prisms, windows, mirrors, metallic surfaces etc.

Precautions:
Do not aim at areas that are essentially reflective, such as a mirror, or which could emit unwanted reflections. Do not look through or beside the optical sight at prisms or reflecting objects when the laser is switched on, in laserpointer or distance measurement mode.
Labelling

a) Laser beam

Laser Aperture

Laser Radiation
Avoid direct eye exposure
Class 3R Laser Product
according to IEC 60825-1
(2007-03)
P\(_{av}\) = 1.5 mW
E\(_p\) = 30 nJ
\(\lambda\) = 532 nm
Type: ScanStation....
Art.No.: ......
Equip.No.: ........
S.No.: ......
Power: ......
Leica Geosystems AG
CH-9435 Heerbrugg
Manufactured: ....
Made in Switzerland

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.
6.6.3 Laser Plummet

General

The laser plummet built into the product produces a visible red laser beam which emerges from the bottom of the product.

The laser product described in this section, is classified as laser class 2 in accordance with:

Class 2 laser products:
These products are safe for momentary exposures but can be hazardous for deliberate staring into the beam.

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>

</tr>
<tr>
<td>Wavelength</td>
<td>620 nm - 690 nm</td>
</tr>
</tbody>
</table>
Warning

From a safety perspective class 2 laser products are not inherently safe for the eyes. **Precautions:** Avoid staring into the beam or pointing the beam at other people.

Labelling

- Class 2 laser warning label is not applied because distance laser is of a higher laser class.
a) Laser beam
b) Exit for laser beam
6.7 Electromagnetic Compatibility EMC

**Description**
The term Electromagnetic Compatibility is taken to mean the capability of the product to function smoothly in an environment where electromagnetic radiation and electrostatic discharges are present, and without causing electromagnetic disturbances to other equipment.

**Warning**
Electromagnetic radiation can cause disturbances in other equipment.

Although the product meets the strict regulations and standards which are in force in this respect, Leica Geosystems cannot completely exclude the possibility that other equipment may be disturbed.

**Caution**
There is a risk that disturbances may be caused in other equipment if the product is used in conjunction with accessories from other manufacturers, for example field computers, personal computers, two-way radios, non-standard cables or external batteries.

**Precautions:**
Use only the equipment and accessories recommended by Leica Geosystems. When combined with the product, they meet the strict requirements stipulated by the guidelines and standards. When using computers and two-way radios, pay attention to the information about electromagnetic compatibility provided by the manufacturer.
Caution

Disturbances caused by electromagnetic radiation can result in erroneous measurements.

Although the product meets the strict regulations and standards which are in force in this respect, Leica Geosystems cannot completely exclude the possibility that the product may be disturbed by very intense electromagnetic radiation, for example, near radio transmitters, two-way radios or diesel generators.

**Precautions:**
Check the plausibility of results obtained under these conditions.

---

Warning

If the product is operated with connecting cables attached at only one of their two ends, for example external supply cables, interface cables, the permitted level of electromagnetic radiation may be exceeded and the correct functioning of other products may be impaired.

**Precautions:**
While the product is in use, connecting cables, for example product to external battery, product to computer, must be connected at both ends.
Warning

Electromagnetic fields can cause disturbances in other equipment, in installations, in medical devices, for example pacemakers or hearing aids and in aircraft. It can also affect humans and animals.

Precautions:
Although the product meets the strict regulations and standards which are in force in this respect, Leica Geosystems cannot completely exclude the possibility that other equipment may be disturbed or that humans or animals may be affected.

• Do not operate the product with radio or digital cellular phone devices in the vicinity of filling stations or chemical installations, or in other areas where an explosion hazard exists.
• Do not operate the product with radio or digital cellular phone devices near to medical equipment.
• Do not operate the product with radio or digital cellular phone devices in aircraft.
### 6.8 FCC Statement, Applicable in U.S.

**Applicability**

The greyed paragraph below is only applicable for products of the ScanStation C10 System without radio, digital cellular phone devices or Bluetooth.

**Warning**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
Warning

Changes or modifications not expressly approved by Leica Geosystems for compliance could void the user's authority to operate the equipment.

Labelling
ScanStation C10

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Labelling GEB271

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
Labelling GKL271

Art. No:

7.7 Accessories

**Standard Accessories, included**
- Transport container for scanner
- Tribrach (Leica Professional Series)
- Internal battery (4x)
- Battery charger with AC power cable, car adapter, daisy chain cable
- Ethernet cable
- Height meter and distance holder for height meter
- Glass cleaning kit
- Cyclone™ SCAN software
- 1 year CCP Basic support agreement

**Additional accessories**
- HDS scan targets and target accessories
- Service agreement for Leica ScanStation C10
- Extended warranty for Leica ScanStation C10
- External battery with charging station, AC power supply and power cable
- Professional charger for internal batteries
- AC power supply for scanner
- Tripod, tripod star, rolling base

* Some systems may not support Windows Vista’s Desktop Windows Manager (DWM) with Leica *Cyclone* and must be operated in Windows Classic Look.

⚠️ Minimum requirements for modeling operations are different. Please refer to *Cyclone* datasheet for specifications, available at your Leica Geosystems dealer.
8 International Limited Warranty, Software License Agreement

International Limited Warranty

This product is subject to the terms and conditions set out in the International Limited Warranty which you can download from the Leica Geosystems home page at http://www.leica-geosystems.com/internationalwarranty or collect from your Leica Geosystems distributor.

The foregoing warranty is exclusive and is in lieu of all other warranties, terms or conditions, express or implied, either in fact or by operation of law, statutory or otherwise, including warranties, terms or conditions of merchantability, fitness for a particular purpose, satisfactory quality and non-infringement, all of which are expressly disclaimed.

Software License Agreement

This product contains software that is preinstalled on the product, or that is supplied to you on a data carrier medium, or that can be downloaded by you online pursuant to prior authorisation from Leica Geosystems. Such software is protected by copyright and other laws and its use is defined and regulated by the Leica Geosystems Software License Agreement, which covers aspects such as, but not limited to, Scope of the License, Warranty, Intellectual Property Rights, Limitation of Liability, Exclusion of other Assurances, Governing Law and Place of Jurisdiction. Please make sure, that at any time you fully comply with the terms and conditions of the Leica Geosystems Software License Agreement.
Such agreement is provided together with all products and can also be referred to
and downloaded at the Leica Geosystems home page at http://www.leica-geosys-
tems.com/swlicense or collected from your Leica Geosystems distributor.

You must not install or use the software unless you have read and accepted the
terms and conditions of the Leica Geosystems Software License Agreement. Installa-
tion or use of the software or any part thereof, is deemed to be an acceptance of all
the terms and conditions of such License Agreement. If you do not agree to all or
some of the terms of such License Agreement, you may not download, install or use
the software and you must return the unused software together with its accompa-
nying documentation and the purchase receipt to the dealer from whom you
purchased the product within ten (10) days of purchase to obtain a full refund of the
purchase price.
END USER LICENSE AGREEMENT FOR MICROSOFT EMBEDDED SYSTEMS

- You have acquired a device ("DEVICE") that includes software licensed by Leica Geosystems from Microsoft Licensing, GP or its affiliates ("MS"). Those installed software products of MS origin, as well as associated media, printed materials, and "online" or electronic documentation ("SOFTWARE") are protected by international intellectual property laws and treaties. The SOFTWARE is licensed, not sold. All rights reserved.

- IF YOU DO NOT AGREE TO THIS END USER LICENSE AGREEMENT ("EULA"), DO NOT USE THE DEVICE OR COPY THE SOFTWARE. INSTEAD, PROMPTLY CONTACT LEICA GEOSYSTEMS FOR INSTRUCTIONS ON RETURN OF THE UNUSED DEVICE(S) FOR A REFUND. ANY USE OF THE SOFTWARE, INCLUDING BUT NOT LIMITED TO USE ON THE DEVICE, WILL CONSTITUTE YOUR AGREEMENT TO THIS EULA (OR RATIFICATION OF ANY PREVIOUS CONSENT).

- GRANT OF SOFTWARE LICENSE. This EULA grants you the following license:
  - You may use the SOFTWARE only on the DEVICE.

  **NOT FAULT TOLERANT.** THE SOFTWARE IS NOT FAULT TOLERANT. LEICA GEOSYSTEMS HAS INDEPENDENTLY DETERMINED HOW TO USE THE SOFTWARE IN THE DEVICE, AND MS HAS RELIED UPON LEICA GEOSYSTEMS TO CONDUCT SUFFICIENT TESTING TO DETERMINE THAT THE SOFTWARE IS SUITABLE FOR SUCH USE.
• **NO WARRANTIES FOR THE SOFTWARE.** THE SOFTWARE is provided "AS IS" and with all faults. THE ENTIRE RISK AS TO SATISFACTORY QUALITY, PERFORMANCE, ACCURACY, AND EFFORT (INCLUDING LACK OF NEGLIGENCE) IS WITH YOU. ALSO, THERE IS NO WARRANTY AGAINST INTERFERENCE WITH YOUR ENJOYMENT OF THE SOFTWARE OR AGAINST INFRINGEMENT. IF YOU HAVE RECEIVED ANY WARRANTIES REGARDING THE DEVICE OR THE SOFTWARE, THOSE WARRANTIES DO NOT ORIGINATE FROM, AND ARE NOT BINDING ON, MS.

• No Liability for Certain Damages. EXCEPT AS PROHIBITED BY LAW, MS SHALL HAVE NO LIABILITY FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL OR INCIDENTAL DAMAGES ARISING FROM OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THE SOFTWARE. THIS LIMITATION SHALL APPLY EVEN IF ANY REMEDY FAILS OF ITS ESSENTIAL PURPOSE, IN NO EVENT SHALL MS BE LIABLE FOR ANY AMOUNT IN EXCESS OF U.S. TWO HUNDRED FIFTY DOLLARS (U.S.$250.00).

• Limitations on Reverse Engineering, Decompilation, and Disassembly. You may not reverse engineer, decompile, or disassemble the SOFTWARE, except and only to the extent that such activity is expressly permitted by applicable law notwithstanding this limitation.

• **SOFTWARE TRANSFER ALLOWED BUT WITH RESTRICTIONS.** You may permanently transfer rights under this EULA only as part of a permanent sale or transfer of the Device, and only if the recipient agrees to this EULA. If the SOFTWARE is an upgrade, any transfer must also include all prior versions of the SOFTWARE.
• **EXPORT RESTRICTIONS.** You acknowledge that SOFTWARE is subject to U.S. export jurisdiction. You agree to comply with all applicable international and national laws that apply to the SOFTWARE, including the U.S. Export Administration Regulations, as well as end-user, end-use and destination restrictions issued by U.S. and other governments. For additional information see http://www.microsoft.com/exporting/.
