

LOGiCAT VU

Manage and Monitor Your Locators

Logicat VU is a Management and Monitoring System to analyse data collected and stored by EZiCAT locators.

Plant, Fleet and Site Managers can evaluate and analyse activity data from one or more cable locators.

Fleet managers can “view” how the survey was conducted and if it has been undertaken to best practice.

REDUCE UTILITY STRIKES

- Management resource to drive down utility strikes
- Demonstrate operations compliance with best practice
- Manage your fleet from one central system
- Transfer multiple instrument data directly from the field
- Develop comprehensive site performance reports
- Display field data overlaid on digital map and images
- Available for mobile and desktop systems

Integrating locator data with analysis software provides a powerful and effective tool for monitoring site operations. Analysing data provides a positive impact on working practices whilst delivering an effective reporting tool for clients, company safety management and operations performance monitoring

LOGiCAT VU - Manage and Monitor your cable locators

Download & transfer data in the field

Analysis your fleet centrally

Drive down utility strikes & keep staff safe

Drive down strikes

Analysis of the data generated during a site utility survey builds a complete picture of the operator and instrument performance. By evaluating the data, managers can minimise risk to excavation teams, additional costs by improving operator performance and ensuring Utility locating work is carried out to best practice.

Provide greater insight into Best Practice

Evaluate data through LOGiCAT VU to investigate how and if the operators have thoroughly undertaken a site investigate, which modes were used and if the overall use was in accordance with company best practice policies

Guide continual operator training

Training is the best solution to help staff understand the correct way of undertaking a utility survey. Logicat VU provides hard data and evidence to support quality improvement.

LOGiCAT VU App

- Site to office transfer of locator data in a single step
- Data transferred via Bluetooth® wireless technology
- Available for SMART phones and tablets
- Free to download, free to use
- Can be installed on multiple devices at no additional cost

LOGiCAT VU software

- Complete solution for managing your EZiCAT fleet
- Builds a database of fleet activity
- Assess operation quality and operator performance
- Reports on best practice performance
- Provides incident reports for post-strike analysis
- File import from locator, LOGiCAT VU App, email or network server
- Use common map formats - GPX, KML and direct into Google Maps
- Export to GIS asset management systems
- Free to download, free to use Windows based system
